The rescues and portables ladders from aluminium. Three persons with poles

Relax. It's a Makros. Working at height has several risks. Choosing Makros is choosing safety, quality and durability. Makros access equipment meets and exceeds the latest European safety standards.

Our ladders have Certificates of Accordance with PN-EN 1147 written by The Józef Tuliszkowski Scientific and Research Centre for Fire Protection.

The spans of extension ladders are put on one in one and they create a very strong construction.

The open profile of siding are patented system of fasten rung create very light ladder and make possible 10 years guarantee for construction, materials and a product at all. Black colour make possible remaining a good temperature in every moment. It's very important in winter, when the temperature can be below 0°C.

DNW – 3080/3

3 part extension and **attachment** ladder, assigned for three person, included supports legs.

Possibilities: 1) Easy to use as single ladder due to its quick unlock system

2) Join the ladders together due to its quick lock system and make it possible to create a ladders length of 3410 mm – 8025 mm (push up every 280 mm).
