Ambulance thought over

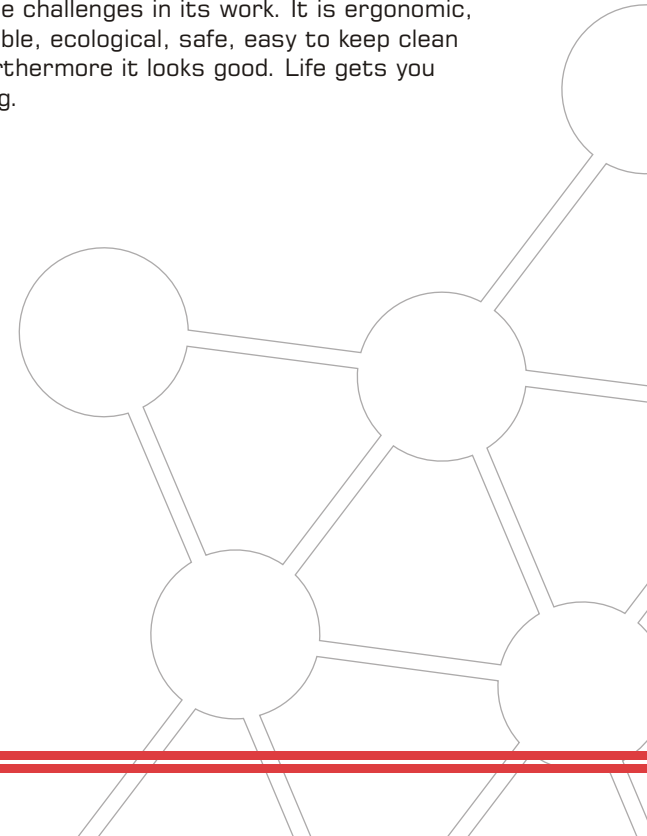

# GENIOS

We rethought the ambulance...  
and came up with Profile Genios.

We combined the knowledge and wishes of first aid professionals with the latest technology and design. That is how Profile Genios was born. Profile Genios is built to spacious Mercedes-Benz Sprinter chassis and there are plenty of features that guarantee your work to be safer, easier and more comfortable.

Profile Genios is built for the future, for all possible challenges in its work. It is ergonomic, adaptable, ecological, safe, easy to keep clean and furthermore it looks good. Life gets you thinking.

# Genios design

Profile Genios is packed with practical details located in places where you have always wished them to be.

## Changing demands considered

Installation plates enable the various relocation of equipment, according to current needs. Relocation is possible for defibrillator, infusion liquid brackets, oxygen and some other electrical devices and rollo lockers a.o.

Lower locker has plenty of room for vacuum mattress and other equipment and locker is open through to the vehicle's left sliding door.

## Time saving solutions

Space for scoop stretcher and spinal board, defibrillator, fire extinguisher, safe helmets and first aid bags etc. is located to the left sliding door in order to get them in use as fast as possible.

## Practical overhead lockers

Overhead lockers are available with five hatches, which open either upwards or downwards. The hatches which open downwards also prevent equipment from falling on the patient.

## Pleasant care environment

You can adjust the lighting according to need. Efficient fluorescent lights and strong, strict spotlights give you the best possible visibility in treatment situations. Soft and pleasant indirect night lighting allows you to make your patient more calm and comfortable but gives you enough visibility for basic treatment.

Highly improved air conditioning and heating system adjusts automatically and is efficient. It guarantees the even temperature and fresh air in patient compartment.

## Easy-to-change oxygen cylinders

Our new innovation saves time and your back; oxygen cylinder rack turns outwards from the vehicle.

## Ergonomic working space

The most essential equipment are on nurse's reach effortlessly. Flow meter is located at nurse's table and oxygen hose comes to the patient from ceiling. Table is spacious and can be equipped with a 12V socket and a foldable top for computer keyboard and other equipment.

Space for equipment and place for files, paper towels and for two disposable glove boxes also available in window panel.

## Improved IWS

The intelligent wiring system (IWS) handles a wide range of routine matters for you. Basic features of this system are automatic controlling of power consumption and temperature of the thermal locker, stepless regulation of the air conditioning and outdoor temperature display a.o. Defect diagnostics let you know of possible malfunctions immediately. IWS also allows connecting of various computers and navigators in its system.

# Genios safety

Profile Genios was born to save lives. The knowledge of safety allows you to focus on your work, in every possible situation.

## Safe, sitting or standing

All the essential treatment equipment is within your reach from your seat. Holding bars in all the right places facilitate moving inside the vehicle, coming in and going out.

## Secure partition wall

Upholstered and padded partition wall is available with manhole or sash window. There is optional location space for additional seats and other equipment, such as drawers and carrying chair also on the partition wall.

## Elegant and outstanding

Profile Genios' design conveys the message of efficient, modern emergency care and first aid. High quality signal taping brings visibility and safety. Integrated alarm lights give the vehicle a streamline looks and aerodynamics.

High-quality upholstery materials are made for hard wear use and they give a pleasant look to the vehicle interiors. Various fresh colour options available in upholstery.

## Corresponding with standards

Profile Genios is corresponding with all the requirements in SFS-EN 1789 EU directive.
