NEO

A great small ambulance

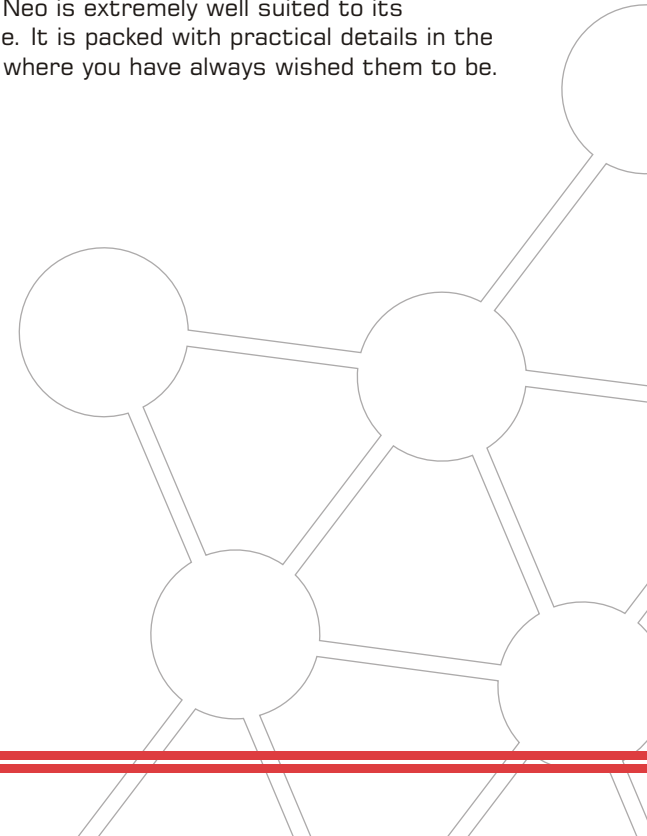

NEO

We combined the features of a large ambulance with a compact chassis. The result is Profile Neo, which our customers have helped to design.

Profile Neo is economical, ergonomic, easy to wash, and as simple to drive as a passenger car. This nimble ambulance can enter small yards and narrow roads going wherever someone needs your help. Volkswagen 4Motion four wheel drive is available.

Profile Neo is extremely well suited to its purpose. It is packed with practical details in the places where you have always wished them to be.

Neo design

All that the first aid professionals need is included in to this spectacularly practical, ecological and good looking ambulance. A big car in smaller frames - Profile Neo.

Ergonomic working space

You can reach the most essential equipment from your seat, with your three-point seat belt fastened. The paramedic's table is also more practical and versatile than ever before.

The asymmetric shape of the ceiling leaves the most space over the head. Free working space is provided also with the placement of the oxygen hoses, which hang down from the ceiling, thus remaining as out of the way as possible. The oxygen bottles are behind the left sliding door in the five-door model, and at the back of the patient-care compartment in the four-door model.

Practical lockers

Overhead lockers are available with four hatches, which open either upwards or downwards. The hatches which open downwards also prevent equipment from falling on the patient.

A pleasant working environment

You can adjust the lighting in accordance with the situation. A pleasant blue trauma light and a soft indirect light that makes the patient feel more comfortable are standard features. Efficient main lights and spotlights are used as working lights. The patient compartment is equipped with efficient ventilation and automatic temperature adjustment.

Easy to wash inside and out

Profile Neo lacks corners and crevices, which are difficult to wash. The floor is seamless and watertight, so it may be sluiced with plenty of water.

Elegant looks

The design of Profile Neo communicates modern and efficient care. An essential part of the ambulance's elegance is the integrated signal lights. If desired, a touch of luxury may be added with individual details.

Advanced electrical system

The intelligent wiring system handles a wide range of routine matters for you. Basic features of this system are automatic controlling of power consumption and temperature of the thermal locker, stepless regulation of the air conditioning and outdoor temperature display a.o. Defect diagnostics let you know of possible malfunctions immediately. Electrical system also allows connecting of various computers and navigators in its system.

Neo safety

Profile Neo was born to rescue. The feeling of safety helps you to concentrate on your work in all situations.

Corresponding with standards

Profile Neo is corresponding with all the requirements in EN 1789 EU directive.

Practical upper cabinets

Items can be removed with ease from the upper cabinets. They can't fall on the patient, since the doors are hinged at the bottom. When open, the doors function as a table without blocking the light.

Practical size

Profile Neo is a fine example of what ambulances were originally invented for: bringing help to the patient instead of bringing the patient to the helpers. The conveniently sized and nimble Profile Neo takes you to the patients, wherever they are.

Safe sitting and standing

Profile Neo was created for hectic situations. Rails in all the right places facilitate coming in and going out, and the floor coating prevents slipping. You can be seated with your seat belt fastened and still reach both the patient and the most essential equipment.
