Efficiency in extreme conditions

Emergency care work and patient transport are all about saving lives. Therefore, do not settle for second best solutions. Incomparable work environment in its class is available for you Profile Vito ambulance

All necessary treatment devices are within reach and patient care is done ergonomically and safely while wearing seatbelt. Work efficiency is increased due to the paramedic box, which includes several features and plenty of storage space. Infusion rack and oxygen outlet are placed on the roof which guarantees practicality for nurse and comfort for patient.

Round-shaped Profile -interior elements are designed to be durable and easily disinfected. Genuine, Finnish design guarantees safety and fulfils cleaning requirements in patient compartment.

Additional information on Profile Vito ambulance is available from Profile Vehicles Oy or your local dealer.

The Profile IWS - More Efficiency To Your Work

Profile Vehicles Oy and IWS International Oy have jointly developed and tested the IWS system for demanding ambulance use. IWS system is a standard component in all Profile Vito ambulances.

Profile-IWS electrical system includes e.g. automated air-conditioning in patient compartment and transmission of the status (information). IWS status information transmission saves space on cabin's dashboard and offers safety and ease of use. Numerous standard features and new functions can be programmed later on.

- Automatic control system for heating/air conditioning
- Automatic control system for power consumption
- Fault diagnostic system
- No fuses or relays
- Possibility to instal many additional functions
- Possibility to switch into CAN-system
- Switch boards in driver's cabin and in patient compartment
